Let people ask your knowledge

Your material answers their questions, in their own language, with your name on every answer.

People have stopped searching. They ask an AI.

Most AI answers come from unknown sources and give no credit to the people who wrote the knowledge.

GDPRchat answers from your material and shows where each answer came from.

What a reader gets

An answer in everyday words. Short and clear, in any of 27 languages.

The source. A link to the article or page behind the answer.

More than text. Maps, timelines, charts and tables when the question calls for them.

On every screen. The web, iPhone, Android, and your own website.

Example

A reader asks:

"What happened to the farms when the railways came?"

They get a short answer, the three articles it is based on, a timeline and a map.

For organisations that hold knowledge

Encyclopedias, archives, museums, libraries, statistics offices, publishers, associations and public bodies.

Three ways to work with us

Inside GDPRchat

Your knowledge reaches people who already use GDPRchat. With your name, and a link back to you. Under contract.

Under your own name

An assistant on your website that answers only from your material. We build it and run it.

Inside your own walls

Everything runs on your own servers. Nothing leaves the building.

Safe

Run in Europe by European companies, under EU law.

Your material is never used to train AI.

Live today

gdprchat.eu, the App Store and Google Play.

Tested against ChatGPT every week.

Improvements often go live the day after someone asks.

Next step

Bring a sample of your material. We show it answering real questions.
